PARAT Solutions launches 10-unit iPad Charge & Sync Dock at Macworld 2012

Berwyn, PA January 20, 2012 – PARAT Solutions, an innovative manufacturer of mobile computing charge and sync solutions, today announces the release of the new PARASYNC for iPad charge and synchronization dock to support up to 10 devices.

The product will be formally launched at Macworld booth # 1041 in San Francisco's Moscone Center on January 26, 2012.

The new PARASYNC for iPad charges and synchronizes content to 10 iPad devices from one iTunes library. PARAT Solutions' new product was carefully designed around the needs of institutional users within the education, healthcare, point of sale, hospitality, museum and tourism verticals.

Each PARASYNC for iPad dock includes 10 specially designed cases that protect both the iPad and the docking system. The cases feature an optional convenient shoulder carry strap.

With no manual cable connections, iPad devices are simply inserted with the included case into one of the dock's charge and sync slots. Convenient charge status LED's show whether the iPad devices are charging, fully charged or syncing. PARASYNC for iPad's attractive design and compact footprint (19" x 11") fits in nearly any existing infrastructure. Optional dedicated storage and security solutions are also available.

According to Peter Jauss, Director of Sales at PARAT Solutions, "Users have come to expect our products to be sleek, compact, easy to use and reliable - and this is no exception."

PARAT Solutions develops "smart products for mobile computing" that charge, synchronize, store, transport and secure multiple mobile computing devices for large-scale deployments.
